PERSONALISED CARE. CONSIDERED RESULTS.

Where confidence begins with care

A personalised collection of facial aesthetic treatments, advanced skin technology and professional skincare from Obagi Medical and Medik8.

BANK, LONDON / AMAZINU.CO.UK

Naturally you. Thoughtfully refined.

Dermal fillers

Hyaluronic acid fillers can restore volume, soften selected folds and enhance facial contours. Treatment is tailored to your anatomy, with the aim of a balanced, natural-looking result.

Anti wrinkle treatment

Following a face-to-face prescribing consultation and clinical assessment, suitable treatment may temporarily relax selected facial muscles to soften expression lines. Your plan is tailored to facial movement and individual goals.

Polynucleotides

A course of treatments focused on skin quality, with the aim of improving hydration, elasticity, texture and fine lines. Suitable areas may include the face, neck and delicate under-eye area.

Skin boosters

Hydration delivered directly into the skin to help improve radiance, softness and fine lines. An option for dull, dehydrated or crepey-looking skin, with a focus on skin quality rather than facial volume.

PRP skin rejuvenation

Uses your own platelet-rich plasma to support natural skin renewal. Treatment may help improve texture, fine lines and overall skin quality on the face, neck and décolletage.

Renew your skin.
Refine your confidence.

A considered setting for personalised care

Thermage

Radiofrequency energy stimulates collagen to help improve mild skin laxity, firmness and facial contours. Suitable areas may include the face, jawline and around the eyes, with progressive improvement and generally minimal downtime.

Clear and Brilliant

A gentle fractional laser treatment for brighter, smoother-looking skin. Helps improve uneven tone, pigmentation, texture and the appearance of pores, usually as a course with relatively little downtime.

Chemical peels

Targeted exfoliation encourages skin renewal and helps improve dullness, congestion, pigmentation and uneven texture. Peel strength and treatment frequency are selected to suit your skin and concerns.

Ultherapy

Focused ultrasound targets deeper structural layers to help lift and tighten the brow, lower face, jawline and neck. Results develop gradually as collagen production is stimulated.

Microneedling

Controlled microchannels stimulate skin renewal and collagen production. Treatment can help improve acne scarring, enlarged pores, fine lines and uneven texture, with a course tailored to your skin.

Exceptional care.
In clinic and at home.

Obagi Medical

We supply Obagi Medical skincare and offer professional Obagi treatments. Personalised programmes address concerns such as pigmentation, uneven texture and visible ageing, with homecare selected to complement your in-clinic plan.

Medik8

We supply Medik8 skincare and offer professional Medik8 treatments. Your practitioner can recommend in-clinic care and a complementary homecare routine tailored to your skin, concerns and goals.

Prescription skincare

Where clinically appropriate, selected programmes may include tretinoin or hydroquinone 4%. Prescription-only skincare requires an appropriate clinical assessment and a prescription, with supply arranged through a pharmacy.

Your journey at Amazin U

01 Consultation

A detailed discussion of your concerns, history and goals.

02 Personalised plan

Suitable options, expected results and aftercare explained.

03 Ongoing care

Review and homecare tailored to support your progress.
